

SPARINGVISION

Clinical Project Manager

Title: Clinical Project Manager

Line Manager: COO

Department: Clinical Department

Location: Paris, France

Our Company

SparingVision is a biotechnology company focused on the discovery and development of innovative therapies for the treatment of blinding inherited retinal diseases. SparingVision is developing SPVN06, a gene-independent treatment for retinitis pigmentosa, the most common inherited retinal degeneration. There is currently no treatment to treat all genetic forms of this rare retinal disease that leads to blindness and affects nearly 2 million people worldwide. SparingVision is a spin-off of the Paris Vision Institute. SparingVision's investors include 4BIO Capital, Bpifrance, Foundation Fighting Blindness (US), Fondation Voir & Entendre, UPMC Enterprises, Jeito Capital and Ysios Capital. Job Summary

We are looking for a Clinical Project Manager for our lead project, SPVN06. As a key member of the clinical team reporting to the Chief Operating Officer, you will be responsible for all clinical activities, following study guidelines, SOPs and applicable regulations along with other project managers of your team.

We are looking for someone experienced in:

- Global management of international clinical studies in early phases and, if possible, ophthalmology and/or orphan drug context.
- Recruitment and oversight of CROs, vendors and other service providers for use in clinical studies.
- Accountable for setting up study budget and agreements.
- Clinical data review.
- Operational and strategic input into study documents (synopsis, protocol, ICF, Study Execution Plans, CSR...) development.
- Oversight of TMF set-up, ongoing quality review, and final reconciliation of study documents including review of site regulatory documents/packages and obtaining of appropriate country/site insurance.

SPARINGVISION

- Oversight of investigational product supply forecasting/management and recommend appropriate trade-off to balance risks and study execution deliverables.

Required experience and skill set:

- Excellent communication, planning and organizational skills.
- Ability to work independently and as a team.
- Full working proficiency in English and French.
- Working knowledge of ICH Guidelines and GCP including international regulatory requirements for the conduct of clinical development programs.
- 10 years of experience in clinical development.

We offer:

- The opportunity to realize your full potential while advancing the development of highly innovative gene therapy treatments in ophthalmology.
- A start-up and entrepreneurial mindset, a hands-on work and flexible work environment
- A full-time and unlimited duration employment contract (CDI). The position is based in Paris.
- Salary depending on qualifications and experience.
